

Hello everybody, let me introduce myself, my name is Serikov Vasiliy.

Today I am going to talk about people all over the world share the same core values.

So, first of all I would like to present my plan. First point is “Do people really have the same values?”, **my next point is** “What is the reason of it”, **and finally** “What are the consequences of this”.

So, my presentation will take about 2-3 minutes and you can interrupt me for asking the questions.

Moving on to the main part of presentation. Well, what about opinion that people have the same values? Many psychologists and historians think that it is true, they together done more researches and make decision that all people have the fundamental idea of about simple values no matter where are you from or when you born, for example, what is the good or bad.

Next, we come to second question and explain what is the reason of this coincidence. Researchers think that the similar core values it is the result of basic needs. Hence, the core values it is what we get at birth. Many scientists hold on this opinion

And finally, what are the consequences of this. This opinion explain why we have similar view on traditional values. So, all values which we determine like a basic it is result of centuries-old development oh human like a person.

That covers everything I wanted to say, and summarize it all I remind what about we said. So, firstly we established that people have same core values and we talked about reasons and consequences of it.

To conclude, I'd like to leave you with the following thought: Try not to become a man of success but rather try to become a man of value. Albert Einstein

That's all I wanted to say, thank you for your attention.
